

Stock

McFarlane has over 4,500 cable assemblies and chains in stock. We have FAA-PMA approved cables available in corrosion resistant stainless or high strength galvanized steel for most 100 and 200 series Cessna aircraft, PA28, PA32 and PA34 series Piper aircraft and G-164 series Ag-Cat aircraft. McFarlane also stocks cables for single engine piston and many turbine and twin engine Beechcraft, and stabilator adjust cables for Piper J-3, PA-11, PA-12, PA-14, PA-16, PA-18, PA-18A, PA-20 and PA-22.

Quality

McFarlane aircraft flight control cables offer quality that is second to none in the aircraft industry. Our quality assurance procedures and personnel are relentless, insuring that our aircraft flight control cables meet the highest standards possible. These standards exceed the military specifications that govern aircraft flight control cables.

Each McFarlane cable assembly is made from the highest quality U.S. manufactured materials from suppliers that have been listed by the U.S. government as being tested and qualified for government use (QPL listed). Before cable assemblies are accepted a sample from each lot of cable assemblies is subjected to a test load equal to 100% of their rated minimum breaking strength and then destroyed. Every cable terminal swaged on a cable assembly is inspected for proper dimension. All cable assemblies produced are pre-stretched to eliminate rigging and growth changes after installation. In addition each and every McFarlane cable assembly must endure a sustained proof load equal to 60% of the cable's minimum rated breaking strength assuring the safest and highest quality aircraft flight control cables available.

- **McFarlane quality is second to none!**
- **Cables available in galvanized and stainless steel.**
- **Cables are sold in kits or separately.**
- **When you order cable and cable terminals from McFarlane you will always receive a certified product!**
- **Our large volume purchases give you great prices!**

Custom Cables

Custom cable assemblies can be fabricated and certified to specification MIL-DTL-6117, or certified to your special specifications. McFarlane custom cables with standard fittings are pre stretched and proof loaded in accordance with MIL-DTL-5688. Cables using nonstandard fittings are proof loaded and pre stretched when possible, but cannot be certified to the MIL-DTL-5688 or MIL-DTL-6117 standards.

Traceability of all materials and test reports are maintained for our custom cables. Our extensive stock of cable and fittings allows us to provide one to three day service for most orders. A custom cable design form is available at www.mcfarlaneaviation.com or send us your old cable.

Custom assemblies are manufactured using the same materials and attention to quality as our FAA-PMA products, however, custom cables are not FAA-PMA approved.

Stainless Steel or Galvanized Steel Cable?

Stainless steel is corrosion resistant and works well in environments such as salt air, water saturation, or agricultural chemicals. Galvanized carbon steel and stainless cables are soaked in a MIL-SPEC rust preventative and lubricating compound. In normal environments the galvanized cable will not suffer from corrosion damage for decades.

The advantages of galvanized cable are its wear resistance and cost. Galvanized cable resists abrasion wear four or five times longer than stainless steel.

Stainless steel wire is high in nickel and therefore softer than the carbon steel wire. Stainless steel cable will show signs of wire wear at pulleys and fairleads much quicker than the galvanized carbon steel wire.

We recommend using galvanized steel cables except in coastal geographical areas, agricultural aircraft, float planes, and other applications where the cable is exposed directly to water. **Only McFarlane has FAA-PMA approved galvanized cables for the new production Cessna aircraft.**

All Beechcraft cables are made from galvanized steel cable and coated with a modified MIL-PRF-16173 compound. This is the same process used on Beechcraft original cables. It provides additional corrosion protection beyond the standard MIL-SPEC rust preventive oil. This provides both exceptional wear resistance and corrosion protection for many years.

Bulk Cable

McFarlane buys certified cable in large quantities direct from the mill. This allows us to provide low prices on bulk cable. McFarlane offers pre-packaged bulk cable in a variety of sizes. Cable can be ordered in 100 ft. or 500 ft. lengths. Certification from the cable manufacturer is given with every order.

Pulleys

McFarlane stocks all pulleys required for Cessna single engine aircraft. Our FAA-PMA approval on pulleys replace the AN, NAS and S series pulleys commonly used on the Cessna aircraft. Pulley kits are available that contain all the pulleys and cotter pins required for one aircraft. See the pulley section on pages 104-105 of the catalog for more details.

Trim Control Chains

McFarlane offers the trim control chains for Cessna single engine and most Beechcraft aircraft. Don't forget to replace your trim control chains and connecting links where necessary!

Hardware

McFarlane stocks an extensive inventory of cable hardware. We offer terminals, turnbuckles, eye ends, sleeves, locking clips, barrels and balls. Let our purchasing volume save you money!

Buy Complete Kits and Save!

McFarlane has complete flight control cable and trim chain kits for each of the different cable groups required to service most single engine aircraft from the Cessna model 120 through model 210 and cable kits for most Piper single engine airplanes. Most of the light aircraft fleet has seen many years of service and have endured many flight hours. Worn, rusty, and frayed cables are now common. It is a tedious, time consuming job to research the part manuals for all of the cables required for a complete aircraft. McFarlane has done the research and has all of the part numbers required for your aircraft.

We stock kits in either galvanized-carbon steel or stainless steel. All components are fully traceable and carry a one year limited warranty.

How to Determine Flight Cable Composition

Using a magnet to determine if a cable is galvanized steel or stainless steel alloy can be unreliable as stainless steel can display magnetic properties which can make alloy discrimination difficult. The unreliability comes from variation in the amount of magnetic permeability found in the stainless steel cable and from strength differences in the magnets used. Stainless steel cables become magnetic in the process of cold working stainless steel wires into cable. The amount of magnetic permeability varies with the amount of cold working the cable was subject to. It is also possible cables in-service will become more magnetic over time as they work-harden through use.

A better test is to use an ohm meter to measure the resistance in a length of cable. Stainless steel has more electrical resistance than zinc or tin coated high carbon steel, which allows us to identify cable composition by the amount of resistance in a length of cable. This test is applicable to the most common aircraft cable diameters: 1/16 through 5/32 with 7x7 or 7x19 construction. To ensure accuracy in cable resistance measurements, use the following procedure:

- You will need access to at least 3 feet of cable.
- The ohm meter and leads must be in good condition.
- Electrical isolation of the cable from the aircraft is required for an accurate resistance measurement. The cable should be removed from the aircraft or at least one end of the cable disconnected from the aircraft. Ensure the cable is not touching anything conductive between the freed end and the area of the measurement.
- For non-auto ranging multimeters, set the resistance range to the lowest scale (typically 1x) and zero the meter.
- Measure the resistance of the cable across a span of at least 3 feet. Assure that the cable is clean and you are getting good contact between the cable and the ohm meter leads.
- Do not allow your fingers to touch the metallic probes of the ohm meter leads when measuring.
- Galvanized cable and tin coated cable will register less than 1 ohm resistance while stainless steel will indicate more than 1 ohm.
- If possible, check your meter on a length of cable where the alloy is known.

If the cable is to be returned to service, reinstall and rig the cable as per the aircraft manufacturer's service manual. Install all required safety devices.

Adjustable Elevator Neutral Rigging Tool for Cessna Aircraft Save time, you'll always have the correct tool! P/N TOOL126

Proper elevator rigging is necessary for full range of motion and maneuverability of the airplane. Many Cessna maintenance manuals require the fabrication of a tool to hold the yoke in the neutral position while the mechanic rigs the elevator control system. These tools utilize the holes for the control gust lock. At least 17 different sizes of rigging tools are required to cover the various Cessna aircraft. Now there is one tool to replace them all.

The McFarlane Elevator Neutral Rigging Tool is adjustable from 0.4" to 2.5" and universal in design, consisting of six different pin sizes to fit your application. This tool may also be used to properly rig other makes of aircraft with similar elevator neutral rigging requirements.

Features and Benefits

- Replaces 17 costly tools
- Quick setup and adjustment
- Simple to use instructions
- Includes compact storage box
- Replacement parts available separately
- Stainless steel components

Note:

Refer to your Cessna maintenance manual to determine if your model requires the use of the elevator neutral rigging tool and follow its guidelines for proper pin selection and adjustment guidelines.

**Fits most Cessna
150 thru 425
aircraft!**

General Beechcraft Cable

Notes: Corrosion Protection

All Beechcraft cables are made from galvanized steel cable and coated with a modified MIL-PRF-16173 compound. This is the same process used on Beechcraft original cables. It provides additional corrosion protection beyond the standard MIL-SPEC rust preventive oil. This provides both exceptional wear resistance and corrosion protection for many years.

Cable Stop P/N MC6057

- Improved for more consistent holding strength.
- Used on the assist step cable on 35, A35 and C35 Beech Bonanzas.
- One McFarlane MC6057 cable stop replaces both Beechcraft 35-524287 nut and 35-524288 screw part numbers.
- Also included on select cable assemblies as required.

Bulk Cable

Great prices on galvanized or stainless steel!

All cable meets MIL-DTL-83420 certification. Manufacturer certification is provided with every order.

- Direct mail purchases let us sell for less!
- Prepackaged in 100 and 500 foot lengths.

Aileron Gap Kit for Cessna Aircraft

Increase performance and safety!

P/N 115-100

Aircraft Development FAA-PMA/STC approved aileron gap seal kit includes aluminum strips to minimize air leakage between the rear wing spar and the aileron. Unlike most kits, this kit seals both the upper and lower gap for maximum aerodynamic effectiveness and efficiency. *This kit isn't a STOL kit, and don't expect miracles with any one of these improvements. However, the improvements are real and when all combined together result in a substantial improvement to your aircraft.*

Increase Performance:

- Reduced drag
- Increased lift
- Increased cruise speed
- Reduced stall speed
- Higher rate-of-climb
- Increased aileron authority
- Increased range (better fuel efficiency)

Increase Safety:

- Better spin resistance
- More aileron authority for crosswinds
- Reduced take-off and landing distances

Control Yoke Universal Joint Kits for Piper Aircraft Helps comply with AD 2010-15-10

Save over 60% off Piper price. Just our reamer saves you \$100 !!

- Individual parts also available separately.
- Hardened stainless steel - Nitrided wear surfaces
- Eliminates free motion for precise and responsive control.
- Replace worn or corroded joints.

AD 2010-15-10 and Piper service bulletin 1197C requires inspection of the connection between the control yoke u-joint and the shaft on the forward (engine) end of the joint. This inspection is a convenient time to replace worn out u-joints. McFarlane has kits including the u-joint, shaft, taper pins, taper reamer, drill bit and other hardware to help comply with this AD, all at a fraction of the cost of buying the parts from Piper.

Maintenance Tip:

How do I know if my universal joint needs to be replaced?

A universal joint attaches to each control yoke shaft behind the instrument panel. Replacement of the universal joint is required if any free motion or rust around the joint pivots is detected or if the joint fails inspection required by AD 2010-15-10.

What can I do if I cannot separate the shaft from the universal joint?

We can help! McFarlane offers a service to remove stuck shafts. Call for details.

Stabilizer Jack Screw Pin Tool for Cessna 180, 182 and 185 Aircraft

P/N TOOL131

- For Cessna 180, 182, 185 jack screws
- Easily and safely remove and install your roll pin with the turn of a wrench
- No more damaging your jack screw by using a punch and hammer
- Manufactured with hardened stainless steel for increased tool life
- Works with both the original Cessna pin and the larger McFarlane pin

Avoid Costly Damage!

Stabilizer Jack Screw Actuator Kit for Cessna 180, 182 and 185 Aircraft

Improved Material for Extreme Corrosion Resistance

McFarlane replaces the original steel components with duplex stainless steel (even better than Monel) components for a long life even in a harsh saltwater environment.

Improved Bearing

Precision bearing reduces free play and features extra low temperature grease for easy turning at low temperatures.

Improved Strength and Reliability

The original Cessna actuators use a 3/32" roll pin to attach the sprockets and retaining collars to the screw bars. These pins are critical as the front of the stabilizer would detach from the airframe if they failed. Although the original roll pins are technically strong enough, the original design is marginal in strength. To provide a more robust design, McFarlane redesigned the sprocket and retaining collar to allow the use of a 5/32" roll pin. This more than doubles the strength of the design. The screw and barrel are match machined for a precision fit.

Convenient Kit

Stabilizer jack-screw kit P/N 1111 is an FAA-PMA/STC approved kit to replace all wear components for the stabilizer actuator assemblies for many Cessna 180, 180A-K, 182, 182A-D, 185, 185A-E, A185E-F aircraft. P/N 1111 includes all parts required to replace the following Cessna parts in both the left-hand and right-hand actuators:

- 0310332 Sprocket
- 0712500-11 Screw-Bar
- 0712500-13 Barrel
- 0712500-7 Collar-Retainer
